## JavaScript Quiz 3

**Name:**

**Write the complete code necessary to satisfy each request below (don't forget to include all opening closing characters using proper syntax and naming conventions to create a fully formed piece of code.**

1. Create an empty array named cities:
2. Assign the empty array cities to be filled with the values of Cleveland, Detroit, and Pittsburgh.  
Hint: No need to use array methods for this, just simply insert the proper values listed above.
3. From the example array above, console log the value of only the second element (Detroit).  
Hint: Select it based on its correct index number.
4. Assign the value of Miami to replace Detroit using indexes to do so. Hint: Use basic assignment no need to use array methods for this example.
5. Use an array method to remove only the last item off the end of the array cities

6. Use an array method to insert the city of New York on to the end of the array cities.

7. Use an array method to remove the second city and replace it with New Orleans.

8. Use an array method to remove the first element.

9. Use an array element to go to the second position, do not remove any, and add San Francisco, and Boston.

10. Using a loop of your choice, write the code that will iterate over each city in the array above and console log "I visited " and the city name for each element.
